

# Single Axis Units - Overview

Frequently used in-house built mechanisms are standardized. Rolled Ball Screw, Precision Ball Screw and Cover Type are lined up.

## Features

### ① High Accuracy

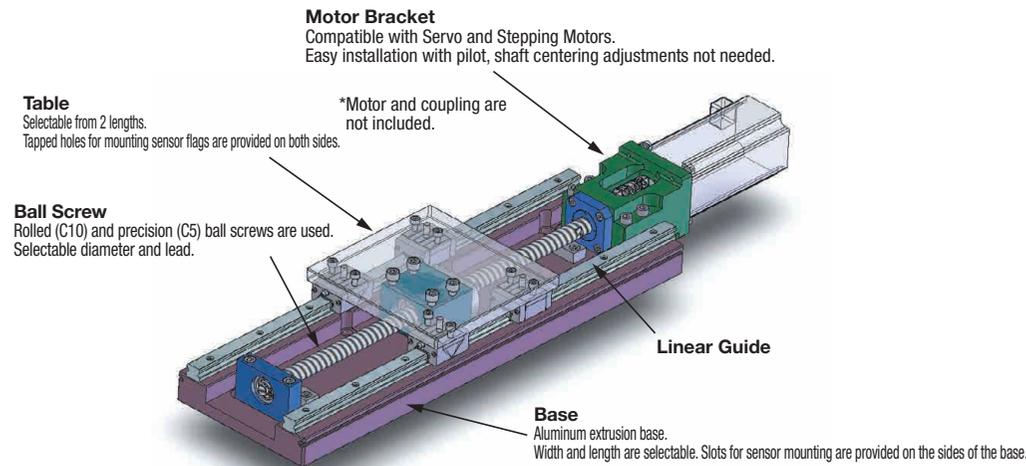

Units with Linear Guides and Ball Screws combined. Rolled ball screw type, precision ball screw type and covered type are available.

### ② Economical

Single axis units suitable for high load transfers at equivalent costs of only the components.

### ③ High Load Capacity

Adoption of Linear Guide for Medium-Heavy Load.

## Single Axis Unit List

Shape	Type	Product Name	Features	Page
	KUA KUB KUH KUT	Rolled / Precision Ball Screw	Single Axis Unit Series Basic Type Rolled Ball Screws (C10) and Precision Ball Screw (C5) are employed. Best suited for heavy load transfer applications.	P.511
	KUAC KUBC KUHC KUTC	Cover Type Rolled / Precision Ball Screw	Cover is provided as standard equipment. Prevents foreign object intrusions offering safety. Easy maintenance.	P.513

## Useful Technical Calculation Software

Life calculation necessary for selection of single axis actuators can be easily achieved for free on MISUMI website: Free on MISUMI website.

# KU Series for Environmental Measures / Technical Data

## Environmental Measures

Cover Types are now available for safe use of Single Axis Units to meet customers' work environments. Neither quotation nor delivery management is required. Management costs are considerably reduced.

### Covered Specifications (P.513)

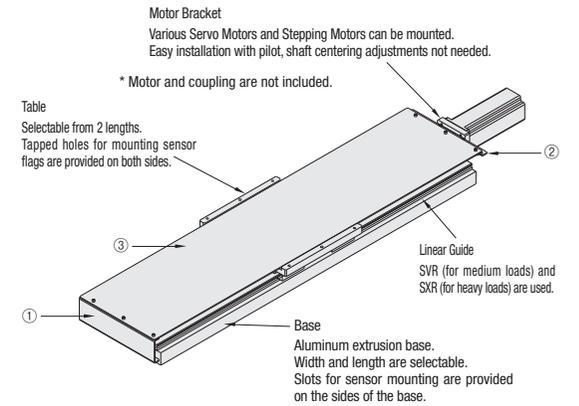

- **Economical:** Prevents components from falling off and dripping liquids, and protects machines economically.
- **Easy:** Ordering procedure and installation are simple. Easy machine cleaning and maintenance.
- **Reduction:** Reduced machine trouble. More advantages with less cost. Labor saving for customers.

- Cover prevents intrusion of foreign objects. Keep foreign objects from falling into the unit, and they are easily removable.

- Easy Cover installation with no complex adjustments.

Applications: The Covered Series is suitable for use in areas where structural component damages due to small parts falling in, and adhesives and greases dripping are to be avoided.

## Cover Mounting Procedure

- 1) KUAC and KUBC are secured to device or table provided by customers.
- 2) Install the included brackets ① and ② to the Single Axis Unit.
- 3) Lastly, secure included cover ③ to included brackets ① and ② installed in Step 2).

Note: Brackets ① and ②, and Cover ③-mounting Screws are included in the product package. Customer assembly required.

## Technical Data

### Max. Velocity

	2020L	-	-	1167	1167	1167	1167	1167	1167	1027	

### Mass KUAC/KUBC/KUHC/KUTC

No.	Mass (kg)									
	L=340	L=400	L=460	L=520	L=580	L=640	L=700	L=760	L=820	
12	5.8	6.5	7.0	7.7	8.2	8.9	9.4	10.1	-	
15	7.1	7.8	8.5	9.2	10.0	10.7	11.4	12.2	12.8	
12	7.3	8.0	8.6	9.2	9.8	10.4	11.0	11.7	-	
15	8.8	9.6	10.5	11.4	12.2	13.1	13.9	14.8	15.7	
20	12.2	13.4	14.5	15.7	16.9	18.0	19.2	20.4	21.5	

### Terminology

- **Positioning Repeatability**  
Repeatability is measured by positioning seven times to a same point in the same direction.
- **Parallelism**  
An actuator is fixed to a surface plate. Parallelism readings are taken from a carriage center mounted dial indicator (0.01 graduation) setup against the surface plate. Measurement is taken along 20 ~ 30mm from the side of the base.
- **Max. Velocity**  
Values listed on each page are calculated based on critical speed and DN value of ball screws. Note that these are not guaranteed data considering motor rotational speed, operating conditions, etc.
